

For Systems Providing Surface Water as a Source of Drinking Water

TABLE 8 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES

| | |
|--|--|
| Treatment Technique ^(a) (Type of approved filtration technology used) | N/A |
| Turbidity Performance Standards ^(b) (that must be met through the water treatment process) | <p>Turbidity of the filtered water must:</p> <p>1 – Be less than or equal to ____ NTU in 95% of measurements in a month.</p> <p>2 – Not exceed ____ NTU for more than eight consecutive hours.</p> <p>3 – Not exceed ____ NTU at any time.</p> |
| Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1. | |
| Highest single turbidity measurement during the year | |
| Number of violations of any surface water treatment requirements | |

(a) A required process intended to reduce the level of a contaminant in drinking water.

(b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.

* Any violation of a TT is marked with an asterisk. Additional information regarding the violation is provided below.

Summary Information for Violation of a Surface Water TT

| VIOLATION OF A SURFACE WATER TT | | | | |
|---------------------------------|-------------|----------|--|-------------------------|
| TT Violation | Explanation | Duration | Actions Taken to Correct the Violation | Health Effects Language |
| | N/A | | | |
| | | | | |
| | | | | |

Summary Information for Operating Under a Variance or Exemption

This image shows a single sheet of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page. There are approximately 20 lines visible. On the left side, there is a small metal binder clip holding the paper. The paper appears to be part of a notebook or a set of loose-leaf papers.
